# ISO/IEC 27001:2014 INFORMATION SECURITY MANAGEMENT SYSTEMS

## WHO IS CONCERNED?

Any organization which feels the need to improve the security of the information related to its business or its customers, using internationally-recognized best practices.

The ISO/IEC 27001 standard is now also a legal requirement to conduct government business and to provide certain services such as tax collection, digital archiving of documents and electronic signatures, addressing, labelling and posting services and registered mail.

## FRAMEWORK

The exponential dissemination of cloud-based automated information systems and applications has placed information security as the key issue for customer confidence and is of utmost importance to businesses today. This technological evolution brings about, along with numerous and undeniable advantages, the emergence and development of many issues related to both the proper use of technological instruments and their inherent security.

The need to adopt organizational models which can assure top management that the investments made in new technologies to improve productivity and keep their company in pace with competitors do not adversely affect the company by creating new pockets of inefficiency and endangering business assets is becoming increasingly important.

## OUR SERVICES

Certification against international standard ISO/IEC 27001 ensures that a company adopt a system for the reliable and secure management of business information systems (both with respect to computers and data) in order to:

- Monitor and reduce management costs;

- Ensure and demonstrate appropriate levels of service;

- Monitor and reduce the risk of disruptions;

- Reduce the risk of service interruptions (business continuity).

## YOUR BENEFITS

Certification against the ISO/IEC 27001 standard guarantees to you the adoption of a reliable, efficient and secure system for the management, confidentiality, availability and protection of information and data in business processes related to:

✓  The design of products and services;
✓  The provision and implementation of services;
✓  Services provided online or remotely;
✓  Help desk and support services.

ISO/IEC 27001 certification is also a valuable tool for the management of your company's compliance issues, for compliance with applicable requirements of  national law and international standards and regulations of security management (such as Italian legislative decree no. 196/03, Italian legislative decree no. 231/01, Italian law no. 262/2005, business continuity regulations).

## THE CERTIFICATION PROCESS

The certification process involves the following steps:

✓  Application for certification;
✓  Acceptance of Certiquality's offer:
✓  Performance of a preliminary audit (optional):
✓  Performance of a certification audit (in two stages):
✓  Management of any identified deficiencies:
✓  Deliberation by the Certiquality Technical Commission:
✓  Surveillance audits.

## FURTHER READING AND PROFESSIONAL TRAINING

Certiquality complements its audit activities with a training programme of classroom courses on company premises as well as distance learning.
